

QUARTERLY REPORTS

2024 – Q1

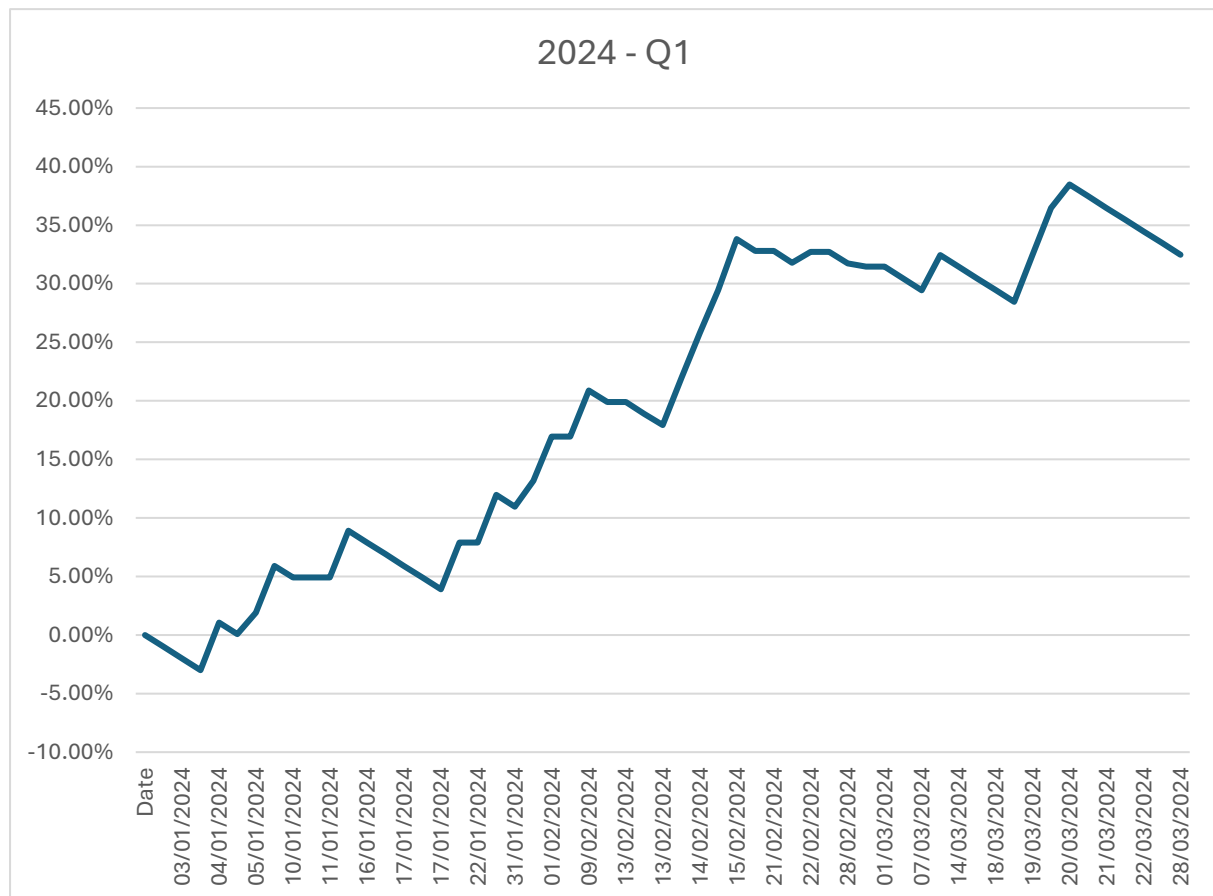

EXECUTIVE SUMMARY

The first quarter of 2024 was characterized by effective risk management and disciplined execution of our **Golden Egg Strategy**. With a total return of **30%**, we demonstrated the robustness of our trading approach, which consistently seeks a **1:4 risk-to-reward ratio**. This quarter also saw controlled drawdowns, with a maximum drawdown of only **5.34%**.

In this report, we will discuss:

1. Key Performance Metrics
2. Insights on the Golden Egg Strategy
3. Drawdown and Risk Management Analysis
4. Comprehensive Insights into Our Trading Approach

TOTAL RETURNS

KEY PERFORMANCE METRICS

Metric	Value
Total Trades	56
Winning Trades (Including STE)	24
Losing Trades	30
Win Rate	42.86%
Total Return	30%
Maximum Drawdown	5.34%

TRADES WIN/LOSS

INSIGHTS ON THE GOLDEN EGG STRATEGY

Our **Golden Egg Strategy** remains at the forefront of our trading approach. The strategy is built on risk management principles that focus on small, controlled losses (1%) and large potential gains (4%). This quarter's key insights include:

- **Winning Trades (Including STE):** Out of 56 total trades, **24 trades were successful**, which includes both trades that hit the take profit target and **STE (Stop to Entry)** trades, where the stop loss was moved to break even after the trade moved halfway to the target.
- **Losing Trades:** There were 30 trades that hit the stop loss, each incurring a controlled 1% loss.
- **Win Rate:** Our win rate for the quarter, including STE trades, was **42.86%**. This solid win rate, coupled with a high-risk-reward ratio, generated substantial returns.
- **Total Return:** The strategy delivered a **30% return** for the quarter, showcasing the power of maintaining a 1:4 risk-to-reward ratio even with nearly half of the trades being losses.

DRAWDOWN AND RISK MANAGEMENT ANALYSIS

Drawdown represents the worst-case scenario for portfolio performance during a period. Maintaining low drawdown is crucial for preserving client capital and ensuring that the portfolio can recover efficiently from temporary losses.

Drawdown Analysis:

- The **Maximum Drawdown** for Q1 2024 was **5.34%**, indicating the largest peak-to-trough decline in performance before a recovery.
- This low drawdown reflects our focus on **risk management** and highlights how, even during adverse market conditions, we were able to protect capital and recover quickly.

Risk Management Tactics:

1. **Stop to Entry (STE):** Our decision to move the stop loss to entry when trades reach halfway to the 4:1 target was a key contributor to our success. This quarter, **5 trades** reached the STE level, allowing us to break even on those trades rather than taking losses.
2. **Controlled Losses:** We strictly adhere to limiting each loss to 1%. This discipline ensures that even during streaks of unfavourable trades, the impact on overall performance is minimal.
3. **Drawdown Recovery:** Our strategy's ability to recover from a **5.34% drawdown** and finish with a **30% total return** speaks to the resilience of the approach. The high-risk-reward structure helps us overcome periods of temporary decline and end with strong gains.

COMPREHENSIVE INSIGHTS: OUR APPROACH AND WHY IT WORKS

Our trading success in Q1 2024 can be attributed to a **consistent, data-driven strategy** that balances risk and reward. Here's why our approach stands out:

1. ASYMMETRIC RISK-REWARD STRATEGY

The **Golden Egg Strategy** focuses on an asymmetric risk-to-reward ratio, where losses are capped at 1% but gains target 4%. This approach allows us to take on several small losses while still generating

significant overall returns. The strategy's **42.86% win rate** translated into a **30% return** because the rewards on winning trades were significantly larger than the losses on losing trades.

2. STRATEGIC RISK MITIGATION

Our use of **Stop to Entry (STE)** demonstrates our commitment to protecting client capital. By locking in neutral outcomes when trades reach 50% of the profit target, we successfully avoided additional losses and preserved capital during less favourable market conditions.

3. LOW DRAWDOWN FOR CAPITAL PROTECTION

In any trading strategy, drawdowns can be inevitable, but our ability to maintain a maximum drawdown of just **5.34%** ensures that we protect capital and minimize downside risk. This allows for a smoother recovery and positions us well for continued growth.

4. FOCUS ON LONG-TERM SUCCESS

We maintain **discipline and transparency**, which are crucial components of long-term trading success. Every trade is executed based on data-driven insights, and every decision is guided by the need to balance risk with reward. We believe in providing transparent reports that accurately reflect our performance, helping clients understand how we deliver consistent, risk-adjusted returns.

CONCLUSION: STRATEGIC GROWTH WITH RISK MANAGEMENT

In Q1 2024, our **Golden Egg Strategy** delivered a strong **30% return** with a **5.34% maximum drawdown**, highlighting the power of disciplined, high-risk-reward trading. Our **42.86% win rate**, including STE trades, demonstrates how we manage risk dynamically and efficiently. The result is a robust strategy that prioritizes capital protection while offering substantial upside potential.
